

Reading the figures

Roles

Wiring & shapes

Qquery (e.g. $\mathbf{XW}^Q$)

data flow

Kkey (e.g. $\mathbf{XW}^K$)

split / merge (bus · junction)

Vvalue (e.g. $\mathbf{XW}^V$)

residual add

input / activation

dimension — size on a free edge

output

operation · sublayer

Grayscale-safe by construction: each role is colour *and* border style (solid / dashed / dotted) *and* an in-box label, so meaning survives without colour. Any colour beyond these roles is local to the figure that uses it.
